4-6-4 DELIVERS  
A BALANCE OF NUTRIENTS,  
HUMATES, COMPOST-DERIVED  
MICROBIOLOGY AND  
SLOW RELEASE NITROGEN

### Benefits of Natural and Organic 4-6-4

- Adds approximately 5% humates by volume, increasing cation exchange and organic matter
- Increases nutrient and water holding capacity of the soil, strengthening plant tolerance against abiotic stress
- Promotes healthy root development
- Improves buffering against changes in soil pH
- Increases the soil's ability to suppress plant pathogens
- Increases soil aggregate stability, porosity, and quality for greater root development and water holding capacity

### Landscapers' Choice

Professional landscapers have turned to Sustāne 4-6-4 for use on high maintenance turf and landscaped environments. While synthetic fertilizers supply plant growth nutrients, they do not supply the organic matter required to maintain quality growth. Using fully composted natural fertilizers increases the levels of beneficial microbial activity, which in turn convert nutrients into plant available forms.

### Turf Establishment

Turf establishment accelerates with 4-6-4 All Natural Organic Fertilizer from Sustāne. A complete package containing Slow Release Nitrogen, chelated micronutrients, organic phosphorous and humic substances. Sustāne 4-6-4 has been demonstrated time and again to surpass synthetic turf starter fertilizers and other sources of humates and plant biostimulants.
